## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 3\_MCQ\_Updated

Attempt : 1 Total Mark : 20 Marks Obtained : 19

Section 1: MCQ

1. What is the primary advantage of using an array-based stack with a fixed size?

**Answer** 

Efficient memory usage

Status: Correct Marks: 1/1

2. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
int stack[MAX_SIZE];
int top = -1;
int isEmpty() {
```

```
return (top == -1);
int isFull() {
      return (top == MAX_SIZE - 1);
   void push(int item) {
      if (isFull())
        printf("Stack Overflow\n");
      else
        stack[++top] = item;
   int main() {
      printf("%d\n", isEmpty());
  push(10);
      push(20);
      push(30);
      printf("%d\n", isFull());
      return 0;
   }
   Answer
   10
   Status: Correct
                                                                        Marks: 1/1
```

3. When you push an element onto a linked list-based stack, where does the new element get added?

#### Answer

At the beginning of the list

Status: Correct Marks: 1/1

4. Consider a linked list implementation of stack data structure with three operations:

push(value): Pushes an element value onto the stack.pop(): Pops the top element from the stack.top(): Returns the item stored at the top of the stack.

What will be the result of the stack after performing these operations?

Answer

The tor ' push(10);pop();push(5);top(); The top element in the stack is 5 Status: Correct Marks: 1/1 5. Here is an Infix Expression: 4+3\*(6\*3-12). Convert the expression from Infix to Postfix notation. The maximum number of symbols that will appear on the stack AT ONE TIME during the conversion of this expression? Answer 4 Marks: 1/1 Status: Correct 6. What is the advantage of using a linked list over an array for implementing a stack? Answer Linked lists can dynamically resize Status: Correct Marks: 1) 7. A user performs the following operations on stack of size 5 then which of the following is correct statement for Stack? push(1); pop(); push(2);push(3); pop(); push(2); pop();

```
pop();
push(4);
pop();
pop();
push(5);

Answer

Underflow Occurs

Status: Correct
```

8. In a stack data structure, what is the fundamental rule that is followed for performing operations?

Answer

Last In First Out

Status: Correct Marks: 1/1

9. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
void push(int* stack, int* top, int item) {
   if (*top == MAX_SIZE - 1) {
      printf("Stack Overflow\n");
      return;
   }
   stack[++(*top)] = item;
}
int pop(int* stack, int* top) {
   if (*top == -1) {
      printf("Stack Underflow\n");
      return -1;
   }
   return stack[(*top)--];
}
```

241901058

Marks: 1/1

```
int main() {
int stack[MAX_SIZE];
   int top = -1;
   push(stack, &top, 10);
   push(stack, &top, 20);
   push(stack, &top, 30);
   printf("%d\n", pop(stack, &top));
   printf("%d\n", pop(stack, &top));
   printf("%d\n", pop(stack, &top));
   printf("%d\n", pop(stack, &top));
   return 0:
 }
 Answer
 302010Stack Underflow
 Status: Wrong
 10. What is the value of the postfix expression 6 3 2 4 + - *?
```

Answer

-18

Status: Correct Marks: 1/1

11. In an array-based stack, which of the following operations can result in a Stack underflow?

#### Answer

Popping an element from an empty stack

Status: Correct Marks: 1/1

12. Which of the following operations allows you to examine the top element of a stack without removing it?

Answer

241	Peek <b>Status</b> : Correct		241901058	Marks : 1/1		
	13. Elements are Ac	dded on of the St	ack.

Marks: 1/1 16. Consider the linked list implementation of a stack.

Answer

Status: Correct

Which of the following nodes is considered as Top of the stack?

Answer

First node

Status: Correct Marks: 1/1

17. Pushing an element into the stack already has five elements. The stack size is 5, then the stack becomes

**Answer** 

Overflow

Marks : 1/1 Status: Correct

18. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
int stack[MAX_SIZE];
int top = -1;
void display() {
   if (top == -1) {
     printf("Stack is empty\n");
o} else {
     printf("Stack elements: ");
     for (int i = top; i > = 0; i--) {
        printf("%d ", stack[i]);
     printf("\n");
   }
void push(int value) {
   if (top == MAX_SIZE - 1) {
     printf("Stack Overflow\n");
   } else {
     stack[++top] = value;
```

```
int main() {
    display();
    push(10);
    push(20);
    push(30);
    display();
    push(40);
    push(50);
    push(60);
    display();
    return 0;
}
```

Stack is emptyStack elements: 30 20 10Stack OverflowStack elements: 50 40 30 20 10

Status: Correct Marks: 1/1

19. In the linked list implementation of the stack, which of the following operations removes an element from the top?

Answer

Pop

Status: Correct Marks: 1/1

20. Which of the following Applications may use a Stack?

Answer

All of the mentioned options

Status: Correct Marks: 1/1

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 3\_COD\_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

In a coding competition, you are assigned a task to create a program that simulates a stack using a linked list.

The program should feature a menu-driven interface for pushing an integer to stack, popping, and displaying stack elements, with robust error handling for stack underflow situations. This challenge tests your data structure skills.

## **Input Format**

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the integer value onto the stack. If the choice is 1, the following input is a space-separated integer, representing the element to be pushed onto

the stack.

Choice 2: Pop the integer from the stack.

Choice 3: Display the elements in the stack.

Choice 4: Exit the program.

#### **Output Format**

The output displays messages according to the choice and the status of the stack:

If the choice is 1, push the given integer to the stack and display the following:
"Pushed element: " followed by the value pushed.

If the choice is 2, pop the integer from the stack and display the following: "Popped element: " followed by the value popped.

If the choice is 2, and if the stack is empty without any elements, print "Stack is empty. Cannot pop."

If the choice is 3, print the elements in the stack: "Stack elements (top to bottom): " followed by the space-separated values.

If the choice is 3, and there are no elements in the stack, print "Stack is empty".

If the choice is 4, exit the program and display the following: "Exiting program".

If any other choice is entered, print "Invalid choice".

Refer to the sample input and output for the exact format.

```
Sample Test Case
```

```
Input: 13
   14
   3
   2
Output: Pushed element: 3
   Pushed element: 4
   Stack elements (top to bottom): 43
   Popped element: 4
   Stack elements (top to bottom): 3
   Exiting program
   Answer
   #include <stdio.h>
   #include <stdlib.h>
   struct Node {
  o int data;
     struct Node* next;
   struct Node* top = NULL;
   // You are using GCC
   void push(int value) {
     struct Node*newnode=(struct Node*)malloc(sizeof(struct Node));
     newnode->data=value;
     newnode->next=top;
     top=newnode;
     printf("Pushed element: %d\n",value);
     //Type your code here.
```

```
241901058
//Type your code here
      if(top==NULL){
        printf("Stack is empty. Cannot pop.\n");
        return;
      printf("Popped element: %d\n",top->data);
      struct Node*temp=top;
      top=top->next;
      free(temp);
    }
    void displayStack() {
      //Type your code here.
      if(top==NULL){
        printf("Stack is empty\n");
        return;
      }

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 3\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Sanjeev is in charge of managing a library's book storage, and he wants to create a program that simplifies this task. His goal is to implement a program that simulates a stack using an array.

Help him in writing a program that provides the following functionality:

Add Book ID to the Stack (Push): You can add a book ID to the top of the book stack. Remove Book ID from the Stack (Pop): You can remove the top book ID from the stack and display its details. If the stack is empty, you cannot remove any more book IDs.Display Books ID in the Stack (Display): You can view the books ID currently on the stack. Exit the Library: You can choose to exit the program.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the book onto the stack. If the choice is 1, the following input is a space-separated integer, representing the ID of the book to be pushed onto the stack.

Choice 2: Pop the book ID from the stack.

Choice 3: Display the book ID in the stack.

Choice 4: Exit the program.

#### **Output Format**

The output displays messages according to the choice and the status of the stack:

- 1. If the choice is 1, push the given book ID to the stack and display the corresponding message.
- 2. If the choice is 2, pop the book ID from the stack and display the corresponding message.
- 3. If the choice is 2, and if the stack is empty without any book ID, print "Stack Underflow"
- 4. If the choice is 3, print the book IDs in the stack.
- 5. If the choice is 3, and there are book IDs in the stack, print "Stack is empty"
- 6. If the choice is 4, exit the program and display the corresponding message.
- 7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact text and format.

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 3\_COD\_Question 3

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Sharon is developing a programming challenge for a coding competition.

The challenge revolves around implementing a character-based stack data structure using an array.

Sharon's project involves a stack that can perform the following operations:

Push a Character: Users can push a character onto the stack.Pop a Character: Users can pop a character from the stack, removing and displaying the top character.Display Stack: Users can view the current elements in the stack.Exit: Users can exit the stack operations application.

Write a program to help Sharon to implement a program that performs the given operations.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the character to be pushed onto the stack.

Choice 2: Pop the character from the stack.

Choice 3: Display the characters in the stack.

Choice 4: Exit the program.

#### **Output Format**

The output displays messages according to the choice and the status of the stack:

- 1. If the choice is 1, push the given character to the stack and display the pushed character having the prefix "Pushed: ".
- 2. If the choice is 2, undo the character from the stack and display the character that is popped having the prefix "Popped: ".
- 3. If the choice is 2, and if the stack is empty without any characters, print "Stack is empty. Nothing to pop."
- 4. If the choice is 3, print the elements in the stack having the prefix "Stack elements: ".
- 5. If the choice is 3, and there are no characters in the stack, print "Stack is empty."
- 6. If the choice is 4, exit the program.
- 7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for formatting specifications.

## Sample Test Case

Input: 2

4

Output: Stack is empty. Nothing to pop.

#### Answer

#include <stdio.h>

```
#include <stdbool.h>
#define MAX_SIZE 100
    char items[MAX_SIZE];
    int top = -1;
    void initialize() {
      top = -1;
    bool isFull() {
      return top == MAX_SIZE - 1;
    }

Section 1: Coding

#### 1. Problem Statement

You are a software developer tasked with building a module for a scientific calculator application. The primary function of this module is to convert infix mathematical expressions, which are easier for users to read and write, into postfix notation (also known as Reverse Polish Notation). Postfix notation is more straightforward for the application to evaluate because it removes the need for parentheses and operator precedence rules.

The scientific calculator needs to handle various mathematical expressions with different operators and ensure the conversion is correct. Your task is to implement this infix-to-postfix conversion algorithm using a stack-based approach.

Example

Input:

Output:

ab+

**Explanation:** 

The postfix representation of (a+b) is ab+.

### **Input Format**

The input is a string, representing the infix expression.

## **Output Format**

The output displays the postfix representation of the given infix expression.

241901058

Refer to the sample output for formatting specifications.

## Sample Test Case

Input: a+(b\*e)

if (!stack)

```
Output: abe*+

Answer

#include <stdio.h>
#include <stdlib.h>
#include <string.h>

struct Stack {
   int top;
   unsigned capacity;
   char* array;
};

struct Stack* createStack(unsigned capacity) {
   struct Stack* stack = (struct Stack*)malloc(sizeof(struct Stack));
```

```
return NULL;
                                                                                241901058
      stack->top = -1;
      stack->capacity = capacity;
      stack->array = (char*)malloc(stack->capacity * sizeof(char));

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Milton is a diligent clerk at a school who has been assigned the task of managing class schedules. The school has various sections, and Milton needs to keep track of the class schedules for each section using a stackbased system.

He uses a program that allows him to push, pop, and display class schedules for each section. Milton's program uses a stack data structure, and each class schedule is represented as a character. Help him write a program using a linked list.

### **Input Format**

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the class schedule to be pushed onto the stack.

Choice 2: Pop class schedule from the stack

Choice 3: Display the class schedules in the stack.

Choice 4: Exit the program.

#### **Output Format**

The output displays messages according to the choice and the status of the stack:

- If the choice is 1, push the given class schedule to the stack and display the following: "Adding Section: [class schedule]"
- If the choice is 2, pop the class schedule from the stack and display the following: "Removing Section: [class schedule]"
- If the choice is 2, and if the stack is empty without any class schedules, print "Stack is empty. Cannot pop."
- If the choice is 3, print the class schedules in the stack in the following:
- "Enrolled Sections: " followed by the class schedules separated by space.
- If the choice is 3, and there are no class schedules in the stack, print "Stack is empty"
- If the choice is 4, exit the program and display the following: "Exiting the program"
  - If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact format.

### Sample Test Case

Input: 1 d

3

```
241901058
Output: Adding Section: d
Adding Section: h
Enrolled 6

#### 1. Problem Statement

Suppose you are building a calculator application that allows users to enter mathematical expressions in infix notation. One of the key features of your calculator is the ability to convert the entered expression to postfix notation using a Stack data structure.

Write a function to convert infix notation to postfix notation using a Stack.

## **Input Format**

The input consists of a string, an infix expression that includes only digits (0-9), and operators (+, -, \*, /).

#### **Output Format**

The output displays the equivalent postfix expression of the given infix expression.

241901058

Refer to the sample output for formatting specifications.

  printf("%s\n", postfix);
  return 0;
                                                                           Marks: 10/10
Status: Correct
```

## 2. Problem Statement

In an educational setting, Professor Smith tasks Computer Science

students with designing an algorithm to evaluate postfix expressions efficiently, fostering problem-solving skills and understanding of stackbased computations.

The program prompts users to input a postfix expression, evaluates it, and displays the result, aiding students in honing their coding abilities.

#### **Input Format**

The input consists of the postfix mathematical expression.

The expression will contain real numbers and mathematical operators (+, -, \*, /), without any space.

#### **Output Format**

The output prints the result of evaluating the given postfix expression.

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: 82/
Output: 4

Answer

#include <stdio.h>
#include <ctype.h>
#include <string.h>

#define MAX_SIZE 100

int stack[MAX_SIZE];
int top = -1;

// Push element onto stack
void push(int value) {
   if (top == MAX_SIZE - 1) {
      return;
   }
   stack[++top] = value;
```

```
// Pop element from stack int pop() {
   if (+a)
       if (top == -1) {
         return -1;
       }
       return stack[top--];
    // Check if character is a digit
    int isDigit(char ch) {
       return isdigit(ch);
// Check if character is an operator
    int isOperator(char ch) {
       return (ch == '+' || ch == '-' || ch == '*' || ch == '/');
    // Evaluate postfix expression
    int evalPostfix(const char* postfix) {
       for (i = 0; postfix[i] != '\0'; i++) {
         char ch = postfix[i];
         if (isDigit(ch)) {
         push(ch - '0'); // Convert char digit to int
         } else if (isOperator(ch)) {
            int x = pop();
            int y = pop();
            int result = 0;
            switch (ch) {
              case '+': result = y + x; break;
              case '-': result = y - x; break;
              case '*': result = y * x; break;
              case '/': result = y / x; break;
              default: return -1;
           push(result);
```

```
return pop();
}
int main() {
    char postfix[MAX_SIZE];
    scanf("%s", postfix); // Read postfix expression as a string
    int result = evalPostfix(postfix);
    printf("%d\n", result);
    return 0;
}
```

Status: Correct Marks: 10/10

#### Problem Statement

Rithi is building a simple text editor that allows users to type characters, undo their typing, and view the current text. She has implemented this text editor using an array-based stack data structure.

She has to develop a basic text editor with the following features:

Type a Character (Push): Users can type a character and add it to the text editor. Undo Typing (Pop): Users can undo their typing by removing the last character they entered from the editor. View Current Text (Display): Users can view the current text in the editor, which is the sequence of characters in the buffer. Exit: Users can exit the text editor application.

Write a program that simulates this text editor's undo feature using a character stack and implements the push, pop and display operations accordingly.

### Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the character to be pushed onto the stack.

Choice 2: Pop the character from the stack.

Choice 3: Display the characters in the stack.

Choice 4: Exit the program.

#### **Output Format**

The output displays messages according to the choice and the status of the stack:

- 1. If the choice is 1, print: "Typed character: <character>" where <character> is the character that was pushed to the stack.
- 2. If the choice is 2, print: "Undo: Removed character < character>" where < character> is the character that was removed from the stack.
- 3. If the choice is 2, and if the stack is empty without any characters, print "Text editor buffer is empty. Nothing to undo."
  - 4. If the choice is 3, print: "Current text: <character1> <character2> ... <characterN>" where <character1>, <character2>, ... are the characters in the stack, starting from the last pushed character.
  - 5. If the choice is 3, and there are no characters in the stack, print "Text editor buffer is empty."
  - 6. If the choice is 4, exit the program.
  - 7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for formatting specifications.

## Sample Test Case

Input: 1 H

1 A

3

Output: Typed character: H

Typed character: A Current text: A H

#### Answer

#include <stdio.h> #include <stdbool.h>
